RESEARCH INTEREST

My research aims to develop effective on-device anomaly detection systems for edge computing in diverse environments. I focus on achieving high-performance anomaly detection on edge devices by leveraging neural network optimization techniques and pre-trained neural networks. This involves exploring unsupervised and self-supervised learning strategies that employ pre-trained attention mechanisms to improve detection accuracy. I have gained substantial experience in industrial anomaly detection in the manufacturing and safety sectors and have also worked on biomedical data analysis.

EDUCATION

Ph.D. Department of Electrical and Computer Engineering Feb.2022 - on going

Sungkyunkwan University

GPA: 4.17/4.5

- Thesis topic: Effective Anomaly Detection Towards Edge Computing by Leveraging Pre-trained Attention Mechanisms

- Thesis advisor: Prof. Juneho Yi

M.S. Department of Computer and Electronic Systems Engineering Mar.2018 - Feb.2020

Hankuk University of Foreign Studies

GPA: 4.43/4.5

- Thesis topic: Performance enhancement method for electrocardiogram analysis

- Thesis advisor: Prof. Il Dong Yun

B.S. Department of Digital Information Engineering Feb.2012 - Feb.2018

Hankuk University of Foreign Studies

GPA: 4.21/4.5

EXPERIENCE

Graduate Research Assistant

Sungkyunkwan University

Oct.2021 - on going

Suwon, Korea

- Pre-trained attention mechanism-based anomaly detection strategy

- Proposed a pre-trained attention-based deterministic masking method for output reliability
- Design a self-supervised learning strategy based on the above deterministic masking method
- Studied the generalization ability of the neural networks for proper anomaly detection models
- Solar panel anomaly detection model with a pre-trained attention mechanism
 - Proposed a way to reduce computational load and power consumption for edge computing
 - Designed defective feature emphasizing method through a pre-trained attention mechanism
 - Proposed a feature extraction method, more effective than an end-to-end deep learning model

Research Engineer

SK Planet Co.,Ltd.

Sep.2019 - on going

Pangyo Techno Valley, Korea

- Research and develop anomaly detection systems
- Recognized as “**Key Talent**” for 3 consecutive years (2021, 2022, and 2023)
 - Awarded annually to one exceptional team member based on peer and leader evaluations
- GAN-based neural network for low-cost particulate matter sensor failure/malfunction detection
 - Proposed a multiple-hypothesis generator to enhance output reliability
 - Designed a feature map distance-based loss term for discriminator training
- ARHIS: Audio-based road hazard information system
 - Designed a neural network for on-device computing purpose
 - Created dataset via driving noise acquisition in various road conditions with Hankook Tire [\[Press Release\]](#) [\[Promotional Video\]](#)

Graduate Research Assistant

Hankuk University of Foreign Studies

Sep.2017 - Aug.2019

Yongin, Korea

- Research on biosignal analysis, medical image analysis, and anomaly detection
- Cardiac disease diagnosis through deep learning and ECG (w/ SNUBH)
 - Collaborated with Seoul National University Bundang Hospital (SNUBH)
 - Studied myocardial infarction and arrhythmia
 - Designed an ECG artifact-removing method for accurate diagnosis of myocardial infarction
 - Proposed signal processing method to emphasize the characteristics of arrhythmia
- Time-series anomaly detection model to complete training in a short time
 - Proposed a neural network structure that completes training in a short period
 - Designed to ease computational load by reducing the number of parameters
 - Studied time-series signal processing including Fourier transform with machine sound
- Small-scale tissue segmentation on neuroimage (w/ SNUBH)
 - Investigated characteristics of the nigrosome of neuroimage for accurate segmentation

- Participated in initial segmentation label construction work

HONORS AND AWARDS

Key Talent Award <i>SK Planet Co., Ltd.</i> - Recognized as an exceptional team member in annual evaluations based on peer and leader evaluations. Only one individual is selected per team each year.	2021, 2022, and 2023
Excellence Award in Manufacturing Data Analysis Competition <i>Korea AI Manufacturing Platform (KAMP)</i>	Nov.2023
Best Conference Paper Award <i>IEEE International Conference on Architecture, Construction, Environment and Hydraulics</i>	Dec.2021
Graduate scholarship <i>Department of Computer and Electronic Systems Engineering, Hankuk University of Foreign Studies</i> - Full-tuition scholarship for full semesters	2018 - 2020
Excellence Undergraduate Thesis Award <i>Department of Digital Information Engineering, Hankuk University of Foreign Studies</i>	Nov.2017
Academic Excellence Scholarship <i>Department of Digital Information Engineering, Hankuk University of Foreign Studies</i> - Full-tuition scholarship (Spring.2016, Fall.2016, and Spring.2017) - Half-tuition scholarship (Spring.2013)	2013-2017
