Aims

My research focuses on robust anomaly detection and efficient representation learning, leveraging advances in pre-trained attention, self-supervised learning, and lightweight neural networks. Drawing from extensive real-world experience with sensor, vision, audio, and hyperspectral systems at SK Planet, I aim to expand toward scalable multi-modal sensing and foundation models for physical-world applications. I also explore generative and pre-trained models to improve defect detection, reduce false positives, and enhance reliability in industrial and medical imaging.
